Greetings,

Working with AIX 5.1 ML3 on a P/690.

I'm trying to add a route to the inet0 device so that it comes up with it on boot. It doesn't appear to take for some reason or I am doing something wrong.

(a look at inet0 before the change)

```
root@nf1n03en1:/ > lsattr -El inet0
hostname nf1n03en1 Host Name True
gateway Gateway True
route net,-hopcount,1,-if,en0,,0,10.15.44.254 Route True
bootup_option no Serial Optical Network Interface True
rout6 FDDI Network Interface True
authm 131073,65536 Authentication Methods True
```

(I make the change here)

```
root@nf1n03en1:/ > chdev -l inet0 -a route='net,-hopcount,0,-if,en1,,0,198.254.18.1'
inet0 changed
```

(and the change does not show up here)

```
root@nf1n03en1:/ > lsattr -El inet0
hostname nf1n03en1 Host Name True
gateway Gateway True
route net,-hopcount,1,-if,en0,,0,10.15.44.254 Route True
bootup_option no Serial Optical Network Interface True
rout6 FDDI Network Interface True
authm 131073,65536 Authentication Methods True
```

(I should see, or would expect to see, two 'route' lines as I do on my other nodes. for example:)

```
root@nf1n03en1:/ > rsh nf1n01 lsattr -El inet0
hostname nf1n01en1 Host Name True
gateway Gateway True
```

AIX-L: chdev issue adding route

```
route net,-hopcount,0,-if,en1,,0,198.254.18.1 Route True
route net,-hopcount,1,-if,en0,,0,10.15.44.254
bootup_option no Serial Optical Network Interface True
rout6 FDDI Network Interface True
authm 131073,65536 Authentication Methods True
root@nf1n03en1:/ >
```

Am I doing this wrong?
