

Sysback Question regarding Excluding a Logical Volume

We are running sysback v5 and I would like to run a sysback of rootvg but I would like to exclude a logical volume called "lvtest". I currently run a command like:

```
#sysback -h'backupnode' -f/usr/lpp/sysback/images/all' '-p'  
'-ITHURSDAY'
```

Can someone tell me what flags I would need to add to have it backup all rootvg lv's except "lvtest".

TIA

Tony
