I understand that AIX-rpm is a 'virtual rpm'. The way that I fixed this problem is by running the command /usr/sbin/updtvpkg. I just ran it as is and didn't pass any arguments to it. The command took a few minutes to run, but after it finished, the AIX-rpm-5.2.0.10-1 package had appeared. I guess the command rebuilt it.

I got the information on this from my account advocate.
