Hi!

Through a stupid typo, we managed to mess up permissions on files all over the system. We've put them back so the system is running fine, but we'd like to restore them to their proper settings.

On many of our other Unix boxes, there is a utility that checks and repairs the permissions on system files. I can't find a similar utility for this AIX box (aix 5.1). Is there such a command???

Thanks!
