Looks to me like you have a 2-way CPU card. So this would be a 'forklift' upgrade. Throw out/re-sell the 2-way card and replace with a 4-way card.

Folks,

We have an RS6000 Model 6H1 Type 7026 that presently  
has 2 processors

We would like to add 2 more processors

Is there a command that will tell me if we have available  
room in the system to add 2 new processors?

Thanks!
