Seems OK. Evidently, the info on the VGs is different ?

Folks,

We are going to sawp a system from a 9980 disk farm  
to a 9960 disk farm temporarily for some testing

Re: Swap disk farms

AIX-L: Re: Swap disk farms

We have performed the following:

mksysb

Backup all other volume groups to TSM

Here's the plan:

export the volume groups except rootvg  
remove the volume groups  
physically disconnect the 9980 disk farm  
connect the 9960 disk farm  
do our testing (It will overwrite rootvg)  
reconnect the 9980 disk farm  
restore rootvg through mksysb  
import the volume groups

Does this sound correct?

Thanks!
