Before acting on this e-mail or opening any attachments you are advised to read The Caudwell Holdings group of companies' disclaimer at the end of this e-mail.

---

Joseph,

Great !!! Thanks for the information. But how come you have such a vast knowledge of all such things which are not usual. Anyway thank you very much.

So as you said the third party who is managing the servers would have created the whole software kit and deployed on the server.

Cheers  
Praveen

Subject: Re: install software

Praveen,

The short answer is if the 3rd party product isn't designed to be installed by 'installp,' then the product won't be registered in the appropriate ODM files, so upon execution of 'lspp,' you won't see the software in its output.

For the system in which you've seen a managed services company's name as the fileset name, I would guess that they packaged their product pursuant to the instructions given in Chapter 20 entitled "Packing Software for Installation" in the "General Programming Concepts: Writing and Debugging Programs" book.

I hope this helps.

Subject: install software

Hi,

If I have a third party software which is not specifically designed for AIX (What I mean by saying this is, the file format of the installation files is not in bff format.), and I want to install and wish to see this file set name in lslpp output, how do I achieve this.

B'coz one of the system I have seen had a fileset that is customised for that server. The lslpp output on the server,had the managed services company's name as the fileset name.

TIA  
Praveen
