See for seeing all last logins of a particular user I use last command and

If I do lsuser -a time_last_login ALL, its working fine in my case.

If I try "lsuer -a time_last_login ALL" it tells me that's not a valid
attribute.

But it's working fine in my case. It very well shows the roles assigned to
the user queried.

Hm. That's curious: I'm seeing the same thing. I've got systems at 4.3.3 and 5.1, but the user definitions are kept in sync from one server, at 5.1 ML06+.

I haven't noticed it before, so I've got no idea how long it's been this way.

Guru's,

It would be great if any of you can help me out here..
I am running the lsuser command on different ids and the results are not reporting any information after the "roles=" part. It seems to be either a flag isn't turned on or something else. Any new id that is created and logged in doesn't report all the information .i.e time_last_login=1098439418 etc even if root creates the id the same happens.
The server is a M80, the OS is AIX 4.3.3.
