Last night we attempted to upgrade the system firmware on a handful of P655 servers. The ones on AIX 5.2 ML02 went fine. But when I tried to do the same to on that is on AIX 5.1 ML04, it took the box down and brought it back up, but did not change the firmware. Ran out of time and could not do that box again and was too concerned to try it on another AIX 5.1 ML04 P655 (7039-651).

Any ideas?

All the P655's were on the oldest firmware level (RJ021209). Taking all to 3J040901. All have on large LPAR. All connected to the same HMC.

Thanks,
