I download GCC 3.3.0 from BULL site and installed it into AIX 4.3.3 version.
I tried to bring up GCC and have error. Can anyone give me a hint?

```
% lspp -l|grep gcc
freeware.gcc.rte 3.3.0.0 COMMITTED GNU GCC compilers V3.3.0
```

```
% gcc
exec(): 0509-036 Cannot load program gcc because of the following errors:
  0509-150 Dependent module libintl.a(shr.o) could not be loaded.
  0509-022 Cannot load module libintl.a(shr.o).
  0509-026 System error: A file or directory in the path name does not
exist.
```

```
% gcc -v
exec(): 0509-036 Cannot load program gcc because of the following errors:
  0509-150 Dependent module libintl.a(shr.o) could not be loaded.
  0509-022 Cannot load module libintl.a(shr.o).
  0509-026 System error: A file or directory in the path name does not
exist.
```

Thanks.
