Got an AIX 4.3.3 box that we are having some nfs problems with. The server hosting the NFS share crashed. Now on the NFS client box (AIX server) we are unable to umount the filesystem. After issuing the `umount -f` command, we get `umount: 1831-015 16 error while unmounting host:/nfs - The requested resource is busy.` We cant find any processes using the filesystem and have tried `fuser`. Any other ideas? Greg Hutchins
