asm does not work through your nic
it goes through the internal hmc-network which cannot be used for
external traffic

check your nic with netstat -v

Subject: Eserver p5 installation

Hi all,

I am having fun installing brand new p5 (5.2), I managed to get passed
the usb keyboard, but the boot process, every tcp/ip, nfs startup
operations are very slow and they do not appear to work.
I can use https:// in order to connect to ASM via browser, but I can't
telnet to that machine neither remotely nor locally.

When trying to run telnetd manually, I got The specified file
descriptor is not a socket.
I can't make NFS/NIS clients working, I can't ping the gateway.

The NIC works, otherwise I would not be able to access the machine via
https:// but nothing else appears to work.

Any ideas where to look ?

Thanks
/Libor
