I'm aware of this problem, but I only have the gcc compiler installed on my Systems and don't like to rebuild Perl from sources.

Is there a way to compile this module in such an env. ?

(I could built some other modules but this one doesn't work).

Regards,
Joris

I always use the same compiler for Perl and all the modules I build. You can run into difficulty mixing and matching compilers with different modules.

Hi List,

I'm have some problems to build the IO::Tty Module for perl 5.8.0 on AIX 5.2.

When I run the "make", I get the following errors:

AW: Problem to compile IO::Tty

AIX-L: AW: Problem to compile IO::Tty

```
/usr/opt/perl5/lib64/5.8.0/aix-thread-multi-64all/CORE/reentr.h:711: error:  
field `_gmtime_struct' has incomplete type  
/usr/opt/perl5/lib64/5.8.0/aix-thread-multi-64all/CORE/reentr.h:714: error:  
field `_localtime_struct' has incomplete type  
/usr/opt/perl5/lib64/5.8.0/aix-thread-multi-64all/CORE/patchlevel.h:80:  
warning: `local_patches' defined but not used  
make: 1254-004 The error code from the last command is 1.  
Stop.
```

Perl has been build with the cc_r compiler and I try to build my module with gcc, which could bet he problem.

Does anybody build this module b4?
Is there a pre-build module which I could download?

Regards,
Joris
