Subject: sendmail attachments

I've searched the archive and google but can someone help me with this.
I send attachments from my aix servers to my groupwise email account through
our SMTP gateway
via the < command (ie. mail user@domain <mailto:user@domain> <attachement).

With this method the attachment arrives as the message body rather than an
attachment as desired.

Is there another way to do this? Can I make a configuration change in
sendmail or is this
a function of my gateway and uuencoded vs MIME attachments?

Mark
