Joseph,

E105 denotes that the system is trying to boot from an AIX image, which it found. Does it just hang there? You may have to boot from the diag CD-ROM and look in the AIX error report to get more details. Also, you may want to run diag and see what's going on in there.

I hope this helps.

Subject: OS upgrade

The system does not boot after I upgraded the B80 from AIX433ML10 to AIX52ML02. The message on LED is "AIX is starting"; the message displays right after LED E105.

The B80 has the latest firmware

ROM Level.(alterable).....sc040624

ROM Level.(alterable).....NAN04194

Joseph
