It really depends on the applications. You need to make sure that you are running versions which will work on both AIX 4.3.3 and AIX 5.2.

You will probably need a new version of the C compiler, too.

Subject: Migration from 4.3.3 to 5.2

Hi,

If I upgrade from 4.3.3 to 5.2 will and go for migration install (third option during installation), will it affect the working of all applications running on aix box?

Up gradation will be taken only on rootvg volume group.

Applications include Oracle database and oracle apps, as they required compilers and java runtime environment for proper working.
