From the restore man page:

-q Specifies that the first volume is ready to use and that the restore command should not prompt you to mount the volume and hit Enter. If the archive spans multiple volumes, the restore command prompts you for the subsequent volumes.

Lamar

How can script this? This command wants me to hit enter here, tia

```
root@xxx /home/root # restore -Tvf /dev/rmt0.1
Please mount volume 1 on /dev/rmt0.1.
    Press the Enter key to continue.
```

Nice kill and thank you!!!!

```
restore -Tvf /dev/rmt0.1
```

You must use /dev/rmt0.1 with the restore command too.
/dev/rmt0 is a rewind "before AND after" driver.

Regards
