Try "lssrc -a"

Mark

Yeah, but unfortunately that is only inetd spawned processes not all daemons or "services". Other process can be spawned via src / inittab / startup scripts that are not controlled by inetd.

Subject: Re: List all enabled services

Another way to do it, is with the: "lssrc -ls inetd" command:

```
# lssrc -ls inetd
```

Subsystem Group PID Status

Re: List all enabled services

AIX-L: Re: List all enabled services

inetd tcpip 9392 active

Debug Not active

Signal Purpose

SIGALRM Establishes socket connections for failed services.

SIGHUP Rereads the configuration database and reconfigures services.

SIGCHLD Restarts the service in case the service ends abnormally.

Service Command Description Status

wsmserver /usr/websm/bin/wsmserver wsmserver -start active
ttdbserver /usr/dt/bin/rpc.ttdbserver rpc.ttdbserver 100083 1 active
cmsd /usr/dt/bin/rpc.cmsd cmsd 100068 2-5 active
dtspc /usr/dt/bin/dtspcd /usr/dt/bin/dtspcd active
time internal active
daytime internal active

<aix-l@Princeton.EDU>

lsof -i | grep LISTEN

or

netstat -a | grep LISTEN

Re: List all enabled services

AIX-L: Re: List all enabled services

will actually show you all processes listening on a socket/port.

/etc/inetd.conf does not show all enabled daemons/services; just those spawned by inetd (the super daemon).

Is of does not come standard with AIX; but you can get a copy from UCLA precompiled or download and compile it.

Subject: List all enabled services

I am in the process of writing a shell script that would List all the Enabled services on AIX servers.

Right now, I am checking /etc/inetd.conf, and listing all the services that are listed here.

Is this the right way to do?

Or is there a command that would give me a list of all enabled services? (I want a list of all enabled services and not the running services).

Thanks in advance.

Prasad

Subject: Re: kerberos - lost root.admin pwd

Hello Holger,

try these two possibilities.

AFAIK this is for PSSP 3.4 !

<snip>

#####

lost root.admin password

#####

kdb_edit -n

Principal name: root

instance: admin

Change Password [no]? y

New Password:

Re: List all enabled services

AIX-L: Re: List all enabled services

Verify New Password:
ctrl+d

```
#####  
# lost masterkey  
#####  
Only recoverable setting up kerberos new!  
On CWS as root:  
kdb_destroy  
rm /var/kerberos/database/*  
rm /etc/krb*  
rm /.k  
rm /.klogin  
kdestroy  
stopsrc -s hardmon kerberos kadmind  
setup_authent  
<snip>
```

HTH,
ku
