somewhere in sms you can switch "boot to sms menu" from enabled to disabled
might be called slightly different no different nodes/models

Subject: system automatically entering sms menus

Dear List,

after installing an mksysb on an p610 with AIX 5.2 ML 5 I have the problem that the system enters the SMS menu after rebooting. OS is installed on 2 internal SCSI-hdds and the bootlist contains only these disks as 1st and second bootdevices. If I exit SMS menus without changing anything the System boots from these harddisks without any errors. How can I make the system boot straight from the disks without entering SMS?

TIA
Christian
