Hi,

I'm trying to get at the temperature in an AIX box.  
I know I can use /usr/lpp/diagnostic/uesensor, but I wanted to do it more  
efficiently than calling that, i.e. direct from a C program.  
Looks like I need to look in ODM, but I can't figure it out.

Anyone done anything like this and can give me some example code, or pointer  
in the right direction?

Thanks,  
Dave Simmonds
