Sorry for not being clear.

I am looking to buy some cheap disk space that would be appropriate for HACMP testing. Not for our production environment at work, but only to study HACMP for my own understanding of the software and be able to setup/test HACMP. I currently have an understanding of it and administer the product at work, but I would like a much deeper understanding of it. Especially v5.2.

So I am looking for some cheap disk space that I can connect to two 43P-150s and test HACMP.

Thanks,

Ferenc Gyurcsan

Please respond to IBM
AIX Discussion List

This is more of a side-note:

If you're looking for something that you'd use for testing and validating proposed changes to your production environment before rolling them out into production, I'd recommend going with something as close to your production environment as possible/feasible (ideally, the exact replica of the production configuration).

If you meant "testing" in another meaning, then I'd go with your suggestion of eBay, plus see what's supported on AIX 5.3/HACMP.

Hello,

What is the cheapest shared disk I can purchase, that could be used for HACMP failover/testing on AIX 5.3 between two 43p-150 servers? I would want to acutally be able to fail over a VG in testing. I am hoping for something used, perhaps from eBay.

Thanks,
