The server runs as my www user :

```
# su - www
$ ulimit -a
time(seconds) unlimited
file(blocks) 2097151
data(kbytes) unlimited
stack(kbytes) 4194304
memory(kbytes) unlimited
coredump(blocks) 2097151
nofiles(descriptors) 2000
$
```

Where the stack looks to be the 4gb's of physical ram that I have in the box.

Michael
