Try this,

On your RedHat machine, edit file of /etc/pam.d/rsh

replace the "required" with "sufficient" in the line of
(the third line from the bottom)

```
auth required pam_rhost_auth.so
```

Subject: [Q] remote access "rsh" question?

I tried to set up remote access from IBM RS/6000 (AIX 4.3.3) to DELL sever
(Redhar As 3.4).

on Redhat server I setup:

```
hosts.equiv ==> "+ hostA"
```

```
%chkconfig --list|grep rsh  
rsh: on
```

on RS/6000 (HostA):

```
%rsh hostB ls  
Permission denied.
```

Does anyone know what wrong it is?

Thanks.
