Subject: need listing of files in mksysb archive

Greetings All:

I need to list the files present in a mksysb archive that was put on tape and identify whether a specific file I am looking for is part of the archive.

I can do this through smit, but there are 30,000 files in the archive, so you'll understand my reluctance to scroll down that list.

Can and How do I search the archive for that one specific file I am hoping to find???

TIA
