I'm going to be installing AIX 5.2 in the near future: migrating from AIX 5.1 and AIX 4.3.3.

Obviously I'll go through the IBM Installation guides and the release notes etc but is there anything I should be aware of that isn't covered in them, or which I might miss?

Servers are an F50 and some p660-6H1s, using SSA of various types. It's a PSSP cluster – hence 5.2, not 5.3. CWS is already at PSSP 3.5 and the nodes will be upgraded to that. Applications are primarily SAP and Oracle. There's also a TSM server, (TSM will be updated), with a FC LTO Ultrium tape library.
