I've OpenSSH running on a windows machine and my Unix (AIX, Linux) can copy files without a trouble using scripts.

Check option "StrictModes no" in sshd\_config on Windows Server.

And public key is in %userprofile%\ssh\authorized\_keys

Hope this helps

Hi all, I'm trying to get scp to work from AIX to a windows 2000 system via a batch script, I've generated the public key and have tried placing it in several places on the windows box but it still asks for a password. Can someone please help me on this, I've looked everywhere I can think of and I find all sorts of ways to gen keys, create batch scripts and where to put the key on Unix but I have somehow missed on where to put the key on windows so it will work with a batch file. Right now I'm using the administrators login on windows but time is not on my side, please, any assistance is greatly appreciated.

Thanks,

Dave Chladek
