I seem to be having a problem running filemon and not sure what's going on.

```
filemon -u -O all -o/tmp/fcheck_feb8.out;sleep 60;trcstop
```

Enter the trcstop command to complete filemon processing

```
trc_rdw: op doesn't match SVC type
/dev/systctl: There is a request to a device or address that does not exist.
[filemon: Reporting started]
[filemon: Reporting completed]
```

```
[filemon: 0.001 secs in measured interval]
/dev/systctl: There is a request to a device or address that does not exist.
```

The output file is pretty much empty except for the headings.
This is on a 433 server.
