I want to schedule my mksysb's to run afterhours now but I'm not sure how to properly capture the output to a log file.

Does anybody have a script they use?

I generally run a ksh file that just runs:

```
mksysb -i /dev/rmt0
```

```
tctl -f /dev/rmt0 offline
```

but if someone has something that logs the result and mails success or failure that would be great.

Mark
