I think that it can't find a valid boot device.

You should check your boot list and hardware. If necessary you can re-create the boot device by booting in maintenance mode and running bosboot.

Instructions for this and similar problems can be found in the "Problem Solving and Troubleshooting" Redbook. I don't have an AIX 4.3.3 version to hand, but if you can't find one on the Redbooks site the 5L version should still be OK for this.

Subject: PReP-BOOT error

I'm on an OLD 4.3.3 system and I just rebooted. I'm getting "PReP-BOOT : Unable to load PReP Image." Any ideas??

Thanks – Steve
