Are these options for AIX ?

Looking @ your notes:

-o : Displays active TCP connections and includes the process ID (PID) for each connection. You can find the application based on the PID on the Processes tab in Windows Task Manager. This parameter can be combined with -a, -n, and -p.

The -o option on AIX does not seem to show the PID... Plus your notes talk about the Windows Task Manager ! LSOF is your friend...

Subject: Re: process-id and port?

netstat [-a] [-e] [-n] [-o] [-p Protocol] [-r] [-s]  
[Interval]

-o : Displays active TCP connections and includes the process ID (PID) for each connection. You can find the application based on the PID on the Processes tab in Windows Task Manager. This parameter can be combined with -a, -n, and -p.

-p Protocol : Shows connections for the protocol specified by Protocol. In this case, the Protocol can be tcp, udp, tcpv6, or udpv6. If this parameter is used with -s to display statistics by protocol, Protocol can be tcp, udp, icmp, ip, tcpv6, udpv6, icmpv6, or ipv6.

Re: process-id and port?

-r : Displays the contents of the IP routing table.  
This is equivalent to the
