What does 'powermt display dev=all|more' show? Or what about "powermt display"

BV

I keep getting this error log entry and can't find where it's coming from.

AIX 5.3 on a 570 connected to a Clariion. Three volume groups; two are on EMC. powermt shows all paths and devices 'active' and 'alive'.

Where else can I start looking?

Not critical - TIA - Steve
