Hi Lee,

2007/1/23, Lee Grinter <lee.grinter@xxxxxxxxxxxxxx>:

We exported all volume groups so /etc/filesystems should have been clean, we never saw any duplicate name issues when importing the vg's either.

My verification scenario:

```
on MachineA:
importvg your_vg
lsvg -l your_vg
mount -a
mount
```

```
umount...
exportvg your_vg
```

```
on MachineB:
importvg your_vg
lsvg -l your_vg
mount -a
mount
```

See the 1st and 7th columns in lsvg and 2nd and 3rd columns in mount output.
Can you see different LV names in outputs?

Cheers, Zoltan
