Hi,

anybody knows if on a 7028 6C1 I can use LPAR to have several aix (5.2 & 5.3).

i know the processor is a powerpc\_power 3.

do you know any place where i can have the instructions on creating those LPARs.?

If I remeber well powerpc\_power 4 is start CPU for LPAR's there are redbooks on LPARing with details on IBM redbook site

I hope this helps

Damir

i believe i should have aix 5.3 as base OS and than run some apps that would GUI direct me on partitioning cpu, memory, disk etc.

TIA,
