To: arch@freebsd.org, imp@freebsd.org

In the change to `stdio.h` in FreeBSD 4.8, you say:
"std{in,out,err} are no longer compile time constants."

Please pardon my incredible ignorance, but what does that mean ?
Can you please point me to a reference ?

```
FILE *def_thing = stdout;
```

no longer works.
apparently, it shouldn't. why ?

Thanks for your time,
Don
