I actually do not plan on replacing the radix code in this round.
I want to see how it performs before I vote it out. I don't currently
see any resource managers in the kernel which obviously would do
a better job.

>*Can you please describe how the interface between ccd(4) and the
>swap subsystem will work? I like this idea, but it isn't
>immediately obvious how you plan to implement striping based on
>load and dynamic addition and removal of swap space.*

```
ccdconfig -c ccd0 128 0 /dev/da0b /dev/da1b /dev/da2b  
swapon /dev/ccd0
```
