

freebsd-current: Re: Buildworld /rescue failures in 5.1

```
/usr/include/machine/_types.h /usr/include/sys/select.h \  
/usr/include/sys/_sigset.h /usr/include/sys/_timeval.h \  
/usr/include/sys/timespec.h /usr/include/string.h \  
/usr/include/strings.h /usr/include/unistd.h /usr/include/sys/unistd.h \  
/usr/include/errno.h /usr/src/contrib/tar/lib/backupfile.h \  
/usr/src/contrib/tar/lib/dirname.h
```

So it is easy to image that this .depend file is crucial to successfully making addext.o.

The .depend file is apparently created by
/usr/obj/usr/src/rescue/rescue/rescue.mk

and that in turn says it is generated from rescue.conf
by crunchgen 0.2. The rescue.mk file includes the rule:

```
tar_make:  
    (cd $(tar_SRCDIR) && \  
        $(MAKE) $(BUILDOPTS) $(tar_OPTS) depend &&\  
        $(MAKE) $(BUILDOPTS) $(tar_OPTS) $(tar_OBJS))
```

and my guess is that construct is not '-j' safe.

I have no idea how to fix that, or even if I'm on the right track, but perhaps the above will be useful to someone who understands parallel makes more than I do...

```
