Is this normal that multiple installations of 5.1-RELEASE complain when running bsdlable:

# /dev/ad0s1:

8 partitions:

# size offset fstype [fsize bsize bps/cpg]

a: 524288 63 4.2BSD 2048 16384 32776

b: 4194304 524351 swap

c: 39102273 63 unused 0 0 # "raw" part, don't edit

d: 1048576 4718655 4.2BSD 2048 16384 8

e: 33335105 5767231 4.2BSD 2048 16384 28552

partition c: partition extends past end of unit

bsdlable: partition c doesn't start at 0!

bsdlable: An incorrect partition c may cause problems for standard system utilities

partition e: partition extends past end of unit

This does not seem to happen if the disk has been labeled by previous versions and upgraded from source.

Pete
