

freebsd-current: make rerelease broken?

make rerelease broken?

There appears to be a breakage of 'rerelease' – that is, 'release' works, but 'rerelease' fails in telnetd. After fixing the Makefile for the gcc -Os build, the build failed in /usr/src/contrib/telnet/telnetd/authenc.c and ext.h. I have since verified that the 'release' succeeds when the 'rerelease' fails. I get messages about 'undefined reference to nclearto' – it's not finding the extern char *nclearto from ext.h. For some reason, it only fails when doing the rerelease.
