Please test this patch:

http://phk.freebsd.dk/patch/if_tun.patch

There is a slight change in semantics in that the interface will disappear entirely when the /dev/tun%d device is closed.

If no objections this will be committed in some days.

| Remove the bogus tunbasedev, instead record the dev_t in our softc.

|

| Rely on the new an cloning friendlier semantics of make_dev().

|

| Properly dismantle and remove the interface and destroy the dev_t

| at last close of the device.

|

| Remove code from MOD_UNLOAD to dismantle things.

|

| Remove the list used to hang the tunnels from, it is no longer needed.
