> *suspect is is usb in general.*

perhaps usb is not the problem? do other usb devices show the same problem or it just bluetooth usb devices? do you suspend your laptop with bluetooth device attached and active stack?

could you please try the following:

- 1) reboot your laptop
- 2) attach bluetooth device and execute `rc.bluetooth start <device>`
- 3) verify that bluetooth works, i.e. try inquiry, l2ping etc.
- 4) stop the stack, i.e. execute `rc.bluetooth stop <device>`
- 5) suspend
- 6) resume
- 7) look into `/var/log/messages` (just to see if you got something related to the bluetooth device)
- 8) start the stack, i.e. execute `rc.bluetooth start <device>`

if this does not crash then i would assume that it is my problem and not usb fault.

thanks,
max
