Hello,

> *When I try to initiate my local bt (/etc/rc.bluetooth start ubt0), I
> receive an error message: Can't load ng_bluetooth.*

ok, what is the exact error message?

> *I've supposed that is because ng_bluetooth.ko module not loaded, but I
> wrong. I've load ng_bluetooth.ko and some other BT modules (like
> ng_btsockets etc), but I've received new error: ngctl: can't create a
> node. permission deny.*

are you running rc.bluetooth as root?

> *P.S. In my /dev dir I don't see any ubt devices, it is normally? Even
> when I attach my BT into the usb.*

that fine. bluetooth device drivers and the stack itself implemented in netgraph(4). bluetooth device drivers will not create device nodes under /dev, they only create netgraph(4) nodes.

thanks,
max

p.s. in the future please ask bluetooth related questions in
freebsd-bluetooth@ mailing list

p.p.s. you do not have to post twice the same message.
