Hi folks,

few hours ago I saw that ndiscvt was connected to the amd64 build, so, about 2 hours ago, I cvsipped and rebuilt my system.

After the reboot, I converted the Windows driver to `ndis_driver_data.h`, builded the `if_ndis.ko` module and loaded `ndisk.ko` and `if_ndis.ko`.

When I try to load `if_ndis` with "`kldload if_ndis`", I get:

`link_elf_obj: symbol MRV8Kx64_sys_drv_data_start undefined`

`kldload: Unsupported file type`

`kldload: an't load if_ndis: Exec format error`

My card is a .11g card onboard my Asus A8V-E Deluxe motherboard.

BTW, am I supposed to use 64bit drivers or 32bit drivers with NDIS?

Any hint will be much appreciated.

Thank you in advance

Best Regards
