Guys,

Can anyone say what is it (see warning message bellow)?

(gdb) r

The program being debugged has been started already.

Start it from the beginning? (y or n) y

Starting program: /usr/X11R6/bin/gnome-dictionary

warning: Unable to get location for thread creation breakpoint: generic

error

[New LWP 100212]

[New Thread 0x806b000 (LWP 100212)]

[Switching to Thread 0x806b000 (LWP 100120)]

Breakpoint 1, dict_disconnect (context=0x8277000) at dict.c:844

844 g_return_if_fail (context != NULL);

This is 100% reproducible. Just run program with breakpoint set.

Do we have something broken?

Thanks,

Alexander.
