Hi folks,

I encountered a problem that need your help.

The matter goes as follow:

My box is Dell DIMENSION 1100 using Dell USB keyboard and mouse. When I installed the 6.0 release, I selected `boot with usb keyboard' option. With that, my usb keyboard worked well. Then I noticed that the usbd was been launched when the prompt appeared, and after that, when I set up my mouse, there is no option or protocols about the usb which can be selected. Moreover, of course, the mouse did not work. I hang on there.

So, who can offer me some information that help me solve it?

Many thanks in advance.

Sandy
