In the last episode (Jul 11), Alfred Perlstein said:

I have current as of last week.

I noticed that if I needed a bgfsck on ufs when rebooting my system would lock up almost immediately. Everything would deadlock.

I've been suffering from trap 12's in rt_check() every day for the last week or so (will post to the list once I get a good coredump) but haven't had the subsequent bgfsck lock up on me yet.
