I've been trying to make release, a 7.0 snap on a new current box and yesterday made it to mkisofs that doesn't seem to be in ports any longer so I installed it but didn't ask about it yesterday and today I got to it not finding the dist file for cdrtools. Could there be a make problem in src/release or could I be doing something wrong?

Thanks,

ed

Memory serves me correctly you have to have sysutils/cdrtools in order to run make release (otherwise you can't make the ISO). I'd check the handbook though to make sure.
