The malloc changes posted last night seem to totally hosed many apps (they just hang)... how do I back out if the `cvs -d /home/ncvs update` I did (keep in mind I did a `rm -rf /usr/src /usr/obj` and recheck out to see if that whould clear it and it didn't)

I missed one file when committing the malloc changes (`src/lib/libc/gen/Symbol.map`), which probably caused the problems you experienced. The file is committed now, so please try again.
