This machine is running sources from 25/11 with AMD64
and ZFS. The
complete dmesg of this machine can be seen at first message
of the
previus thread
([http://www.nabble.com/BETA3-crash-\(zfs-related---\)-t4865643.html](http://www.nabble.com/BETA3-crash-(zfs-related---)-t4865643.html))

I can provide any additional information need.

Any help is **very** appreciated !

The machine rebooted again last night, the Panic String:
kmem_malloc(131072): kmem_map too small: 1004441600 total allocated

Just a wild idea: maybe you could contact Pawel directly and provide him
access to your machine?

I could provide any information and even access if need, I just don't
want to boring him sending private mails, last time that I talked to
Pawel he was very busy.

I'm open to suggestions and want to help !
