To: freebsd-hackers@freebsd.org

Hi! This is the ezmlm program. I'm managing the mainbionewslist@bcs-hq.com mailing list.

To confirm that you would like

freebsd-hackers@freebsd.org

added to the mainbionewslist mailing list, please send an empty reply to this address:

mainbionewslist-sc.1054480242.ohiojhehbgahcioepao-freebsd-hackers=freebsd.org@bcs-hq.com

Usually, this happens when you just hit the "reply" button. If this does not work, simply copy the address and paste it into the "To:" field of a new message.

This confirmation serves two purposes. First, it verifies that I am able to get mail through to you. Second, it protects you in case someone forges a subscription request in your name.

--- Administrative commands for the mainbionewslist list ---

I can handle administrative requests automatically. Please **DO NOT SEND THEM TO THE LIST ADDRESS!** If you do, I will not see them and other subscribers will be annoyed. Instead, send your message to the correct command address:

To subscribe to the list, send a message to:

<mainbionewslist-subscribe@bcs-hq.com>

To remove your address from the list, send a message to:

<mainbionewslist-unsubscribe@bcs-hq.com>

Send mail to the following for info and FAQ for this list:

<mainbionewslist-info@bcs-hq.com>

confirm subscribe to mainbionewslist@bcs-hq.com

freebsd-hackers: confirm subscribe to mainbionewslist@bcs-hq.com

<mainbionewslist-mainbionewslist@bcs-hq.com>

Similar addresses exist for the digest list:

<mainbionewslist-digest-subscribe@bcs-hq.com>

<mainbionewslist-digest-unsubscribe@bcs-hq.com>

To get messages 123 through 145 (a maximum of 100 per request), mail:

<mainbionewslist-get.123\_145@bcs-hq.com>

To get an index with subject and author for messages 123-456 , mail:

<mainbionewslist-index.123\_456@bcs-hq.com>

They are always returned as sets of 100, max 2000 per request, so you'll actually get 100-499.

To receive all messages with the same subject as message 12345, send an empty message to:

<mainbionewslist-thread.12345@bcs-hq.com>

The messages do not really need to be empty, but I will ignore their content. Only the ADDRESS you send to is important.

You can start a subscription for an alternate address, for example "john@host.domain", just add a hyphen and your address (with '=' instead of '@') after the command word:

<mainbionewslist
