To: [freebsd-hackers@freebsd.org](mailto:freebsd-hackers@freebsd.org)

I'm looking at the Interface Masters Niagara 2250 dual gig passthrough NIC for a filtering system. It has a watchdog timer that can bypass the interfaces if the software fails to update the timer. Interface Masters' web site claims FreeBSD 4 support, but when asked they were only able to provide a Linux driver.

Has anyone done a FreeBSD driver for this card or patched `if_em.c` for it?

Thanks,  
Guy Helmer
